

A MODERN MOVIE MANAGER WITH C#

Project Documentation

AMMAR AHMED (023-19-0107), MUHAMMAD HASEEB(023-19-0061)
INSTRUCTOR: MR. JAVED ALI ABBASI

System Description and Project Idea:

A Modern Movie Manager that can provide user-friendly interface to the users for storing their movies along with the information about the movies such as: custom thumbnail/poster, director, date of release, genre, etc, so that users can search for the particular movie using the particular information about that movie. This application allows the user to search for a movie under any genre category and find their desired movies to play. Moreover, this application also allows the user to store the movies the user wants to watch, this feature is called a “Watchlist”. In this feature the user can also store information about the movies that user have watched and many other functionalities that we shall discuss later in the document.

Functional Requirements:

Functional requirements refer to the functionalities provided to the user. Following are the functionalities and features provided to the users of the application.

1. Users can add the movies.
2. Users can provide the information related to the movies such as (Name, Date of Release, Name of Director, Thumbnail of choice, Genre, and Source of the movie)
3. Users can play the movies from the collection.
4. Users can organize the movies by using genre category and sorting.
5. Users can sort the movies collection by Name or by Year.
6. Users can search the movie using either the movie’s name or using the director’s name
7. Users can add movies to their watchlist (A Watchlist feature is used for storing movies that user wants to watch later).
8. Users can keep track of the watched movies.
9. Users can edit the information about the movies.
10. Users can edit their own profile information.
11. There can be multiple users in the same computer, having their own separate data and collection of movies.

Non-Functional Requirements:

A non-functional requirement is a specification that describes the system’s operation capabilities and constraints that enhance its functionality. Following are the non-functional requirements.

1. Timer
2. Source Images
3. Movement of controls in the panel
4. Button Layouts
5. Text Font
6. Login and sign-up security
7. User validation
8. Exceptional handling

System Features:

- Space Required: Less than 100MB
- Language Used: C#
- Framework: .NET Framework
- Storage: Filling

Technologies, Tools and Controls Used:

- Picture Boxes
- Timers
- Panels
- Serialization
- Forms
- Events
- Filling
- Textboxes
- CheckBoxes
- Buttons

Execution Path and Functionalities

Sign in or Sign Up:

At this stage of the application, the user has to specify whether the user is an existing user or a new user to the application. Note that there can be ANY number of users on a single computer, and each user would have their own movies collection, info, watchlists, preferences of thumbnails and so on.

Note that movies are displayed by their name in ascending order.

You can also sort the movies in genre interfaces:

4. Sorting Movies

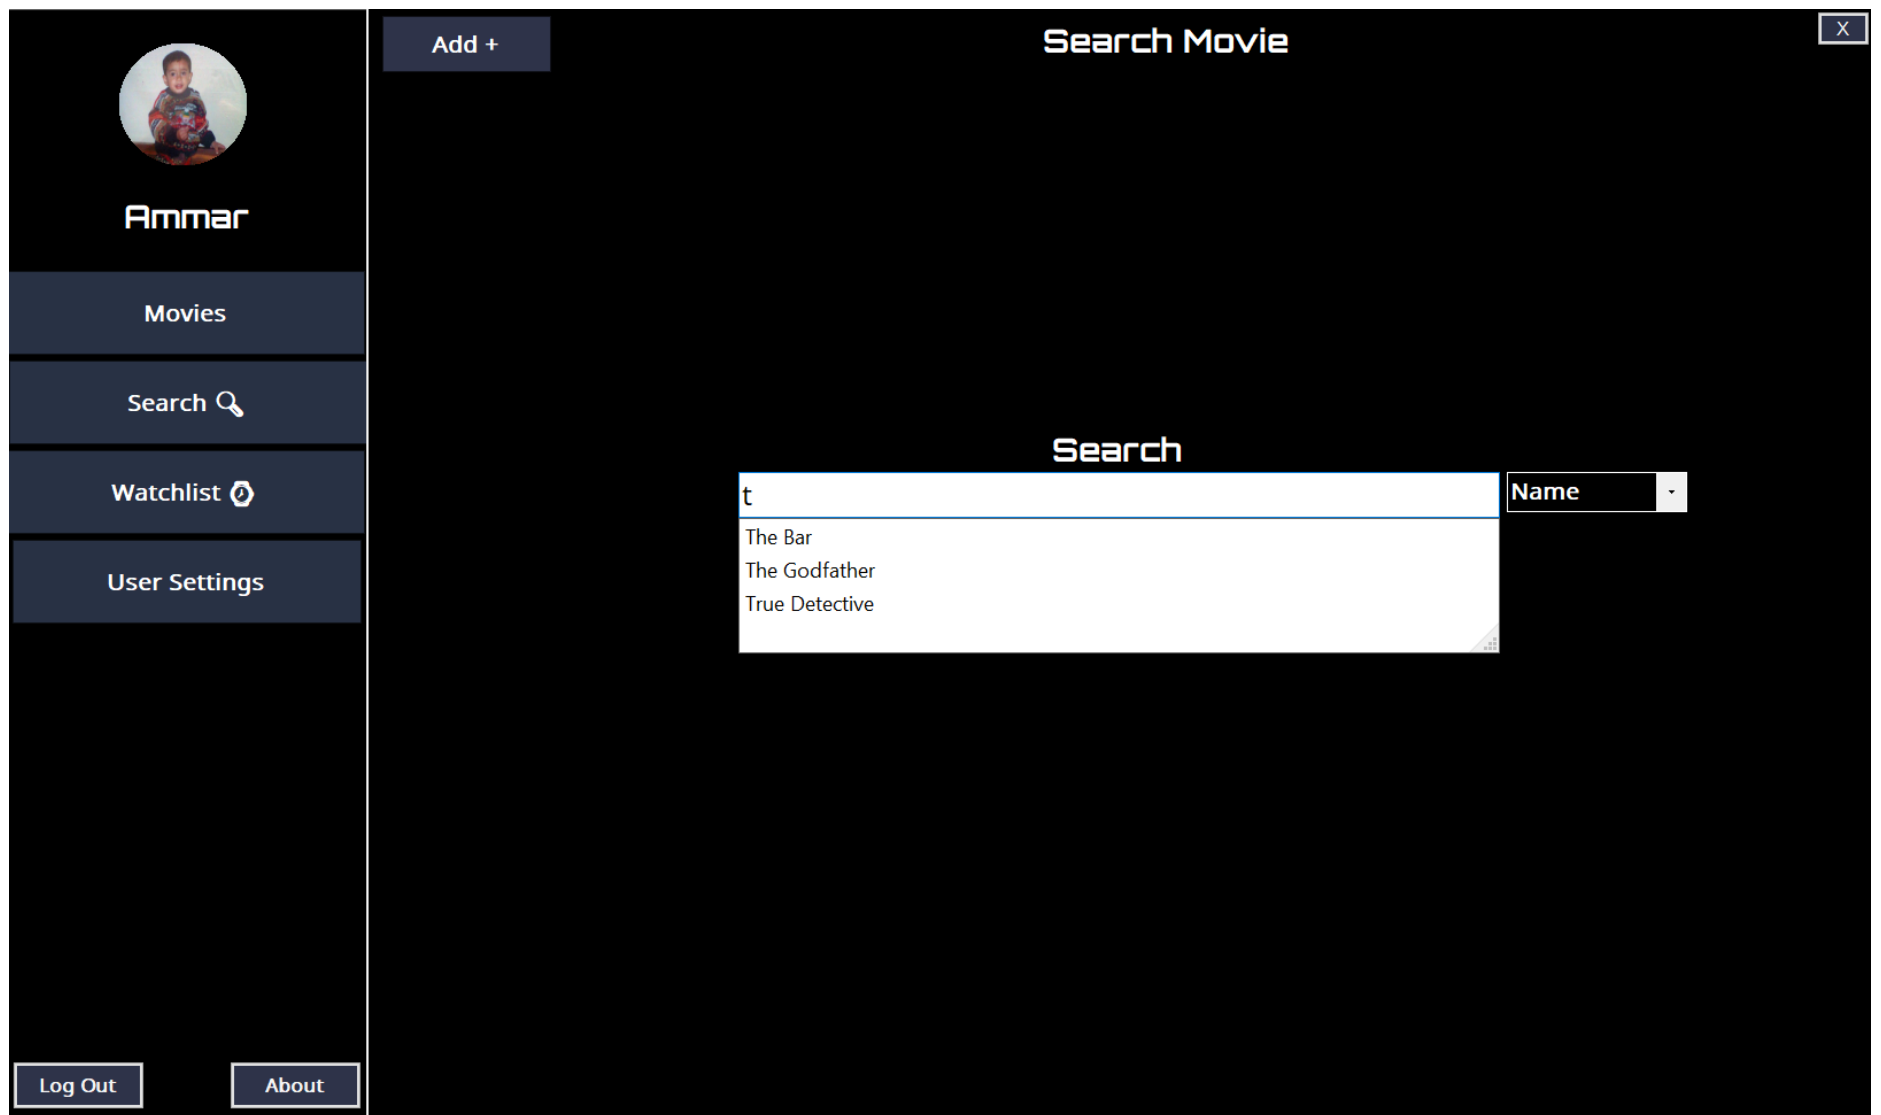

Use Case Name	Sorting by name or by year
Trigger	The user can sort the movies by year or by name.
Precondition	There should be at least one movie present.
Basic Path	<ul style="list-style-type: none">• The User specifies whether to sort the movies by year or by name.• If the user chooses to sort the movies by year, then the movies are displayed in ascending order of their year.• If the user chooses to sort the movies by name, then the movies are displayed in ascending order of their names.
Postcondition	There is none.
Exception Paths	The user may close the application at any time, without losing the data.

Searching Movies

Searching movies through name:

The user can search a particular movie by their name. Note that the user is provided with autocomplete functionality. The user is displayed auto suggestions as the user is typing the movie name.

After Search:

The user can see the information about the searched movie such as year, name, director, and duration of the movie. The user can also play the searched movie as well as edit it.

Searching movies through director name:

The user can search a particular movie by the movie's director name. Note that the user is provided with autocomplete functionality. The user is displayed auto suggestions as the user is typing the movie name.

Search Results:

The director named Alonzo has two movies in the user’s collection:

The user can also play the searched movie as well as edit it.

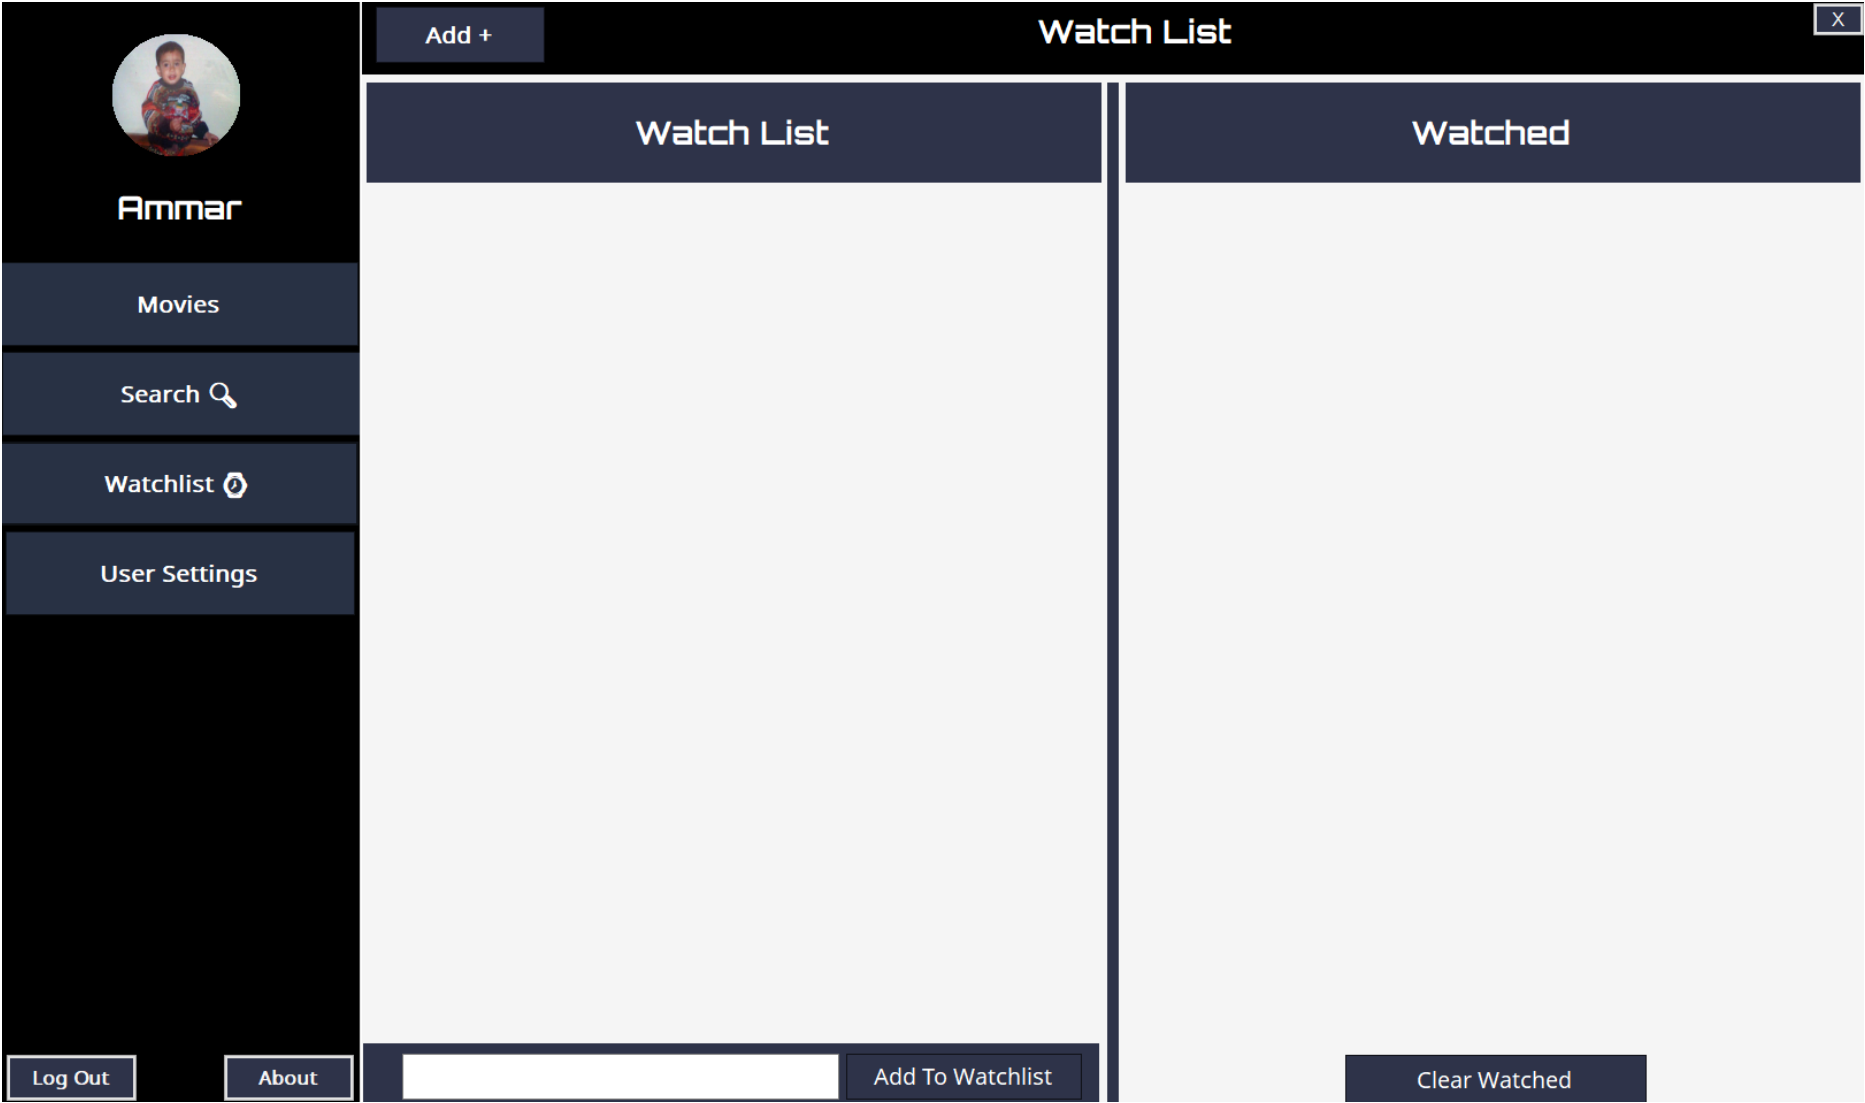

5. Searching Movies

Use Case Name	Searching movies by name or by movie director name.
Trigger	The user can search the movies by director name or by movie’s name.
Precondition	The user must be logged in.
Basic Path	<ul style="list-style-type: none">• The User specifies whether to search the movie by name or by director name. The user can choose this option through drop down combo box.• If the user chooses to search the movie by name, then the user is displayed the searched movie with all the information as well as its duration.• If the user chooses to search the movie by director name, then all the movies directed by that director in the user’s collection are displayed.• In both of these options user can play as well as edit the searched movies.
Postcondition	If the user chooses to edit the movie, then the user must “Save Changes” before closing the application.
Exception Paths	The user may close the application at any time, without losing the data.

Watchlist Feature

In the Watchlist feature, there are two panels. The first panel is used for user to add the movies that the user wishes to watch later. The second panel is used to keep track of the movies that have been watched by the user.

After adding some movies to watchlist:

7. User Settings

Use Case Name	User edits their profile information.
Trigger	The user can change their name, username, password, or their profile picture.
Precondition	The user must be logged in.
Basic Path	<ul style="list-style-type: none">• The user clicks on the “User Settings” button• Makes the desired changes.• Clicks on the save changes button.
Postcondition	The user must save the changes before exiting for the changes to take effect.
Exception Paths	The user may close the application at any time, without losing the data.

Conclusion:

This modern movie manager provides a robust and good-looking interface to the users so that they can maintain their movie collection in a single application. This application frees users from having to look up for movies in folders. Furthermore, users have many other features such as searching by director name, sorting movies by year or by name, choosing their own thumbnails, and organizing movies into their genres.
